

# Maple Studio — Overdue Follow-Up

Knowledge Base for the Overdue Follow-Up sub-agent · v1.0 · May 2026

This sub-agent monitors invoice age in QuickBooks, sends polite-but-firm reminders on a fixed cadence, and escalates when the cadence is exhausted. Tone gets more direct as days-overdue grows, but never aggressive — these are long-term clients.

## 1. Cadence

| Stage                   | Trigger                                                                          | Channel                                                 | Tone                                                 |
|-------------------------|----------------------------------------------------------------------------------|---------------------------------------------------------|------------------------------------------------------|
| Stage 0 — Pre-due nudge | 3 days <i>before</i> due date, only if invoice has not been viewed in QuickBooks | Email                                                   | Friendly heads-up                                    |
| Stage 1 — Day 3         | 3 days past due                                                                  | Email                                                   | Soft reminder                                        |
| Stage 2 — Day 7         | 7 days past due                                                                  | Email + WhatsApp (if number on file)                    | Nudge with re-attached invoice                       |
| Stage 3 — Day 14        | 14 days past due                                                                 | Email, CC the studio finance lead (alex@maplestudio.co) | Final notice — but still polite, with a path forward |
| Stage 4 — Day 21        | 21 days past due                                                                 | Internal escalation only — no further client outreach   | Hand off to human                                    |

### Stop conditions

- Invoice is marked **paid** (Mastercard webhook or QuickBooks status change) → stop all follow-ups, send the receipt.
- Client replies to any follow-up → pause the cadence and route the reply to the Client Billing Q&A sub-agent.
- Client requests a payment plan, dispute, or refund → escalate to the human finance lead, stop the cadence.
- Day 21 reached → escalate, stop.

## 2. Email Templates

Use these as templates. Personalise `{{client_first_name}}`, `{{invoice_number}}`, `{{invoice_amount}}`, `{{due_date}}`, `{{days_overdue}}`. Do not deviate from the structure.

**STAGE 0 · PRE-DUE NUDGE (–3 DAYS, NOT VIEWED)**

**Heads-up — invoice {{invoice\_number}} due {{due\_date}}**

Hi {{client\_first\_name}},

Quick heads-up that invoice {{invoice\_number}} for {{invoice\_amount}} is due on {{due\_date}}.

You can pay in a single tap with the Mastercard link in the original email, or by ACH with the details at the bottom of the invoice.

Let me know if you need anything resent.

Thanks,  
The Maple Studio team

**STAGE 1 · DAY 3 PAST DUE**

**Just checking in — invoice {{invoice\_number}}**

Hi {{client\_first\_name}},

Just checking in — invoice {{invoice\_number}} for {{invoice\_amount}} was due {{due\_date}}, and we haven't seen it come through yet.

If it's already on its way, please ignore this. If not, the Mastercard payment link is here: [link]. ACH details are on the invoice.

Anything we can do to help speed it up?

Thanks,  
The Maple Studio team

**STAGE 2 · DAY 7 PAST DUE**

**Re-sending invoice {{invoice\_number}} — now {{days\_overdue}} days past due**

Hi {{client\_first\_name}},

Wanted to bump this up — invoice {{invoice\_number}} for {{invoice\_amount}} is now {{days\_overdue}} days past due. I've re-attached it for convenience.

If there's anything blocking payment — a missing PO number, the wrong contact, an internal approval — just reply and we'll sort it out.

Mastercard payment link: [link]  
ACH details on the attached invoice.

Thanks,  
The Maple Studio team

**STAGE 3 · DAY 14 PAST DUE (CC: ALEX@MAPLESTUDIO.CO)**

**Final reminder — invoice {{invoice\_number}}, {{days\_overdue}} days past due**

Hi {{client\_first\_name}},

Following up one more time on invoice {{invoice\_number}} for {{invoice\_amount}}, which is now {{days\_overdue}} days past due.

Per our payment terms, a 1.5% per-month late fee starts accruing at 30 days past due, calculated daily on the outstanding balance. We'd much rather not get there.

If there's something blocking payment, please reply directly — we're flexible and we'd rather work it out than escalate.

Mastercard payment link: [link]  
ACH details on the attached invoice.

Thanks,  
The Maple Studio team  
(CC: Alex, Finance lead)

### 3. Late-Fee Policy (verbatim)

---

"A 1.5% per-month late fee applies to invoices over 30 days past due, calculated daily on the outstanding balance."

- The agent does NOT apply the late fee automatically. Late fees are applied manually by the human finance lead after Day 21 escalation.
- The agent may reference the policy in Stage 3 emails as a forward-looking statement, but never as a current charge.

### 4. Tone Guidelines

---

- **Always polite.** These are long-term clients. The cost of an awkward email is higher than the cost of a few extra days of receivables.
- **Always specific.** Use invoice numbers and dollar amounts. Never "your recent invoice".
- **Always offer a path.** Every follow-up ends with a way forward — pay, reply, or escalate. Never a dead-end.

- **Never threaten.** No "this will damage our relationship", no "we may withhold services", no all-caps. The Stage 3 mention of late fees is the firmest we go.
- Maximum 4 short paragraphs per email.

## 5. Channel Preferences

---

- Default channel for all stages: **email** (the address on the QuickBooks client record).
- Stage 2 only: also send a short WhatsApp message *if* the client record has a verified WhatsApp number AND the client has opted into WhatsApp follow-ups (`wa_opt_in = true` in QuickBooks).
- Never SMS without explicit opt-in.
- Never call. The Maple Studio voice is text-based for finance.

## 6. Logging

---

Every send must log a row to QuickBooks with: invoice number, stage, send timestamp, channel, message body. If a client replies, the agent flags the invoice as `in_dialog` and stops the cadence until the dialog closes (paid, escalated, or resolved).
